Allowance

Response to Arguments

1. Applicant's arguments, see Remarks page 14 last paragraph and page 15 first and second paragraphs, filed on April 22, 2009, with respect to claims 15 and 16 have been fully considered and are persuasive. The claim rejection has been withdrawn.

Allowable Subject Matter

2. Claims 15, 16, 19-26, and 31-34 are allowed. Claims 1-14, 17, 18, 27-30, 35, and 36 cancelled.

3. The following is an examiner's statement of reasons for allowance:

The present application provides a method to analyze printed color image. In order to be "tied-to" another statutory category, structure associated with another statutory category, in this case the red color sensor, green color sensor, and blue color sensor, has be positively recited in a step or steps significant to the basic inventive concept to reproduce color perceptions in a human eye.

The present application comprises the following features in combination with other recited limitations, which the closest prior art of record and the references cited in form PTO-1449 taken either singly or in combination does not teach:

- selecting said first calculation specification for forming a weighted difference between said second color channel image sensor signal and said first color

channel image sensor signal corresponding to a first color perception of a human eye; selecting said second calculation specification for forming a weighted difference between said combination of said first color channel image sensor signal and said second color channel image sensor signal, and said third color channel image sensor signal corresponding to a second color perception of a human eye; providing at least one reference image; generating first and second reference image output signals of first and second reference image compensation channels; providing a classification system; using said classification system for comparing said first and second reference image output signals with said first and second printed image output signals in said reference memory; classifying said first and said second output signals of said first and second compensation color channels, representing said receptive fields of color perception of a human eye using said classification system; and determining an acceptability of said human eye color perception of said printed image based on said classification of said first and second printed image output signals with said first and second reference image output signals performed in said classification system (independent claim 15).

- selecting said first calculation specification for forming a weighted difference between said second color channel image sensor signal and said first color channel image sensor signal corresponding to a first color perception of a human eye; selecting said second calculation specification providing a linkage of a minimum one of the first color channel image sensor signal and the second color

channel image sensor signal, with said third color channel image sensor signal corresponding to a second color perception of a human eye; providing at least one reference image; generating first and second reference image output signals of first and second reference image compensation channels; providing a classification system; using said classification system for comparing said first and second reference image output signals with said first and second printed image output signals in said reference memory; classifying said first and said second output signals of said first and second compensation color channels, representing said receptive fields of color perception of a human eye using said classification system; and determining an acceptability of said human eye color perception of said printed image based on using said classification of said first and second printed image output signals with said first and second reference image output signals performed in said classification system (independent claim 16).

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
